PROFESSIONAL SUMMARY

Full-Stack Developer with 1+ year of commercial experience building, configuring and testing hospitality workflow software across guest-facing booking systems and staff/admin tools. Hands-on with JavaScript, React, Python, Django, SQL, PostgreSQL and YAML/Axion, alongside practical work in debugging, data validation, QA testing and technical documentation. Worked with live booking, service, provider, room and restaurant data across three resort environments, including on-site testing, staff training and rollout preparation in St Lucia. Comfortable learning unfamiliar systems, investigating issues and turning operational requirements into maintainable software workflows.

TECHNICAL SKILLS

Frontend: JavaScript, React, TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap, responsive UI, component-based development, Vite

Backend & APIs: Python, Django, Flask, REST API concepts

Data: SQL, PostgreSQL, MySQL/MariaDB, DBeaver, data validation and data cleaning

Workflow & Configuration: YAML/Axion, SQL-backed forms and reports, Jinja-style templating, booking and availability logic

Testing & Delivery: Git, GitHub, Postman, Vercel, Heroku, Cloudinary, Amazon S3, manual QA, bug reproduction, regression testing and technical documentation

AI-Assisted Development: Lovable, GitHub Copilot, Codex, prompt-led prototyping, generated-code review and workflow testing

COMMERCIAL EXPERIENCE

Junior Full-Stack Developer

Technocore / Sunswept - BodyHoliday Project | Remote + St Lucia | Feb 2025 - Present

Contributed to FEGA and SAM, two connected guest-facing and staff/admin systems supporting registration, onboarding, bookings, calendars, service operations, assignments, reporting and resort administration.

Configured YAML/Axion-driven forms, reports, admin screens, guest journeys and HTML email templates across FEGA and SAM, translating operational requirements into maintainable booking and service-management workflows.

Used SQL within YAML configuration and DBeaver to retrieve, update, clean and validate live data covering services, providers, rooms, restaurants, users, permissions, posting codes and booking records across three resort environments.

Tested and debugged registration, onboarding, preference, booking, calendar, concierge, restaurant, permissions and reporting flows; reproduced defects, documented findings and confirmed fixes across guest and staff systems.

Configured service categories, durations, weekly availability, provider-service mappings, room-service mappings and operational metadata across spa, activities, water sports and restaurant workflows.

Delivered remote and on-site rollout support to seven operational teams across BodyHoliday, StolenTime and Cap Maison, including testing, staff training, permissions checks and issue resolution during go-live preparation in St Lucia.

Reviewed and debugged AI-generated React and Supabase-style output produced through Lovable, GitHub Copilot and Codex, correcting UI behaviour, state, routing, data flow and workflow logic before validating imported data.

Modelled and validated complex booking requirements including multi-provider couple treatments, composite services, room constraints and provider availability to support safer future assignment logic.

SELECTED PROJECTS

Developer Portfolio | React, TypeScript, Vite, Tailwind CSS | [Live site](#)

Built and deployed a responsive portfolio that presents commercial experience, public projects, certificates, a downloadable CV and case studies without exposing confidential client information.

FEGA / SAM AI-Assisted Rebuild Concept | Lovable, React-style architecture, Supabase-style data modelling

Translated legacy hospitality workflows into a modern application concept, then reviewed and tested generated implementation work against real booking and operational requirements.

Imported and validated service, provider, availability, room and location data, cleaning legacy codes into clearer operational groupings.

Reviewed generated features for UI behaviour, routing, state, data flow and workflow accuracy, refining outputs where the implementation did not match the requirement.

Modelled assignment filtering, room blocking, provider availability, composite services and multi-provider booking rules.

ADDITIONAL PROJECTS

Graphic Design Blog | Python, Django, PostgreSQL, Cloudinary | [GitHub](#)

Built and deployed a full-stack blog with user registration, authentication, profiles, CRUD functionality, saved posts, image storage and responsive styling.

JavaScript Colour Palette Generator | JavaScript, HTML, CSS | [GitHub](#)

Built an interactive colour tool using DOM manipulation, event listeners, keyboard controls, copy-to-clipboard functionality, responsive layout and CSS animations.

Flask Collections App | Python, Flask, SQL-backed storage

Built a small record-management application with database-backed storage and CRUD-style functionality as part of the Technocore entry process.

EDUCATION & CERTIFICATIONS

Level 3 Diploma in Software Development - Code Institute Full Stack Development Programme | Jun 2024 - Oct 2024

HTML, CSS, JavaScript, Python, Django, SQL, REST API concepts, Git/GitHub, deployment and Agile team workflows.

Level 3 Diploma in Website Design & Marketing for Entrepreneurs - NetcomUK | Jul 2023 - Oct 2023

Highfield Level 2 Diploma in Digital Marketing & Software Development - Back2Work | May 2023

EARLIER EXPERIENCE & ADDITIONAL BACKGROUND

Customer Service Adviser - E.ON Next Energy & Gas Supply | Nov 2022 - Apr 2023 • Labourer - QED Scaffolding | Jun 2019 - Mar 2020 • Warehouse Operative - Amazon / B&M | Jul 2018 - Apr 2019

Graphic design and digital media background, including Photoshop, After Effects, UI layout, visual design and digital content creation.
