PROFILE

Junior Full-Stack Developer with commercial experience supporting a hospitality and wellness booking platform for luxury resort operations. After completing a 16-week full-stack development bootcamp, I moved into real client software work with Technocore, contributing across guest-facing booking flows, staff/admin service management, SQL data operations, YAML/Axion configuration, testing, training, bug fixing and AI-assisted app replication.

I have hands-on experience working with real operational data, booking workflows, provider/service/room mappings, guest onboarding, restaurant/service bookings and admin management systems. I also travelled internationally to St Lucia as part of a go-live preparation team, supporting in-person training, testing, permissions checks and operational rollout preparation for resort teams.

Currently strengthening React, TypeScript, LLM app development, AI agents and workflow automation to build modern AI-assisted software products and contribute confidently to commercial development teams.

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, React fundamentals, responsive UI, component-based layout, Bootstrap, jQuery

Backend: Python, Django, Flask foundations, REST API concepts

Databases: SQL, MySQL/MariaDB, PostgreSQL, DBeaver

Configuration / Low-Code: YAML/Axion, SQL-backed forms, reports, workflows, Jinja-style templating

Tools: Git, GitHub, VS Code, Heroku, Postman, Cloudinary, Amazon S3

AI / Modern Development: Loveable, GitHub Copilot foundations, LLM workflow planning, AI-assisted app generation, n8n learning path

Other: QA testing, bug reproduction, data cleaning, client training, technical documentation, UI/UX awareness

COMMERCIAL EXPERIENCE

Junior Full-Stack Developer

Technocore / Sunswept - BodyHoliday Project | Remote / St Lucia business trip | Feb 2025 - Present

Worked on a commercial hospitality and wellness booking platform used across guest-facing and staff/admin workflows. The platform included FEGA, a guest app for registration, onboarding, preferences, bookings, calendars and restaurant/service booking, and SAM, a service/admin management system for staff operations, service setup, providers, rooms, calendars, assignments, reports and workflows.

Key Responsibilities

- Supported YAML/Axion-based app configuration across forms, reports, admin setup screens, guest flows, service flows and HTML email templates.
- Worked with SQL inside YAML configuration files to pull, display, update and validate app data.
- Used DBeaver and SQL to inspect, clean, update and manage real resort data across services, providers, rooms, restaurants, users, rules, posting codes and booking-related records.
- Configured service categories, prepaid/inclusive treatment categories, durations, weekly availability, provider mappings, room mappings and operational metadata.
- Assisted with bug fixing and testing across FEGA guest flows and SAM staff/admin workflows, including registration, onboarding, booking, calendars, concierge booking, restaurants, permissions and reports.
- Delivered remote and in-person training to resort teams across spa, concierge, activities, watersports, pre-arrivals, restaurants and management users.
- Travelled internationally to St Lucia as part of the go-live preparation team, supporting on-site testing, staff training, data validation, permissions setup and issue resolution.
- Took ownership of AI-assisted replication work in Loveable, rebuilding FEGA/SAM concepts into a more modern app structure and importing/validating services, providers and room/location data.

Key Achievements

- Progressed from bootcamp graduate into real commercial development work within weeks of completing training.
- Supported a complex hospitality booking system across guest-facing and staff-facing workflows.
- Managed and cleaned large volumes of real resort operational data across multiple departments and resort contexts.
- Delivered training and support to real operational teams across BodyHoliday, StolenTime and Cap Maison.
- Gained hands-on commercial experience with SQL, database management, YAML configuration, frontend templates, testing, bug fixing and client communication.
- Supported international go-live preparation in St Lucia, working directly with resort teams to validate workflows and resolve operational issues.
- Contributed to AI-assisted rebuilding of the platform in Loveable, including service import, provider import, room/location import, operational grouping, assignment planning, composite service logic and multi-provider requirements.

SELECTED COMMERCIAL PROJECT

BodyHoliday / SAM / FEGA Hospitality Booking Platform

Supported development, testing and rollout preparation for a resort booking and service management system covering guest journeys, pre-arrival preferences, spa treatments, activities, watersports, restaurants, staff operations and admin setup.

- Worked across FEGA guest registration, onboarding, preference, dietary, spa, service booking and calendar flows.
- Worked across SAM service, provider, room, restaurant, user-permission, reporting and operational setup flows.
- Supported provider-service mappings, room-service mappings, restaurant/dietary reporting, SQL fixes, validation queries and dummy guest QA scenarios.
- Helped prepare the platform for operational rollout under tight deadlines by supporting data readiness, staff training, QA testing, bug fixing, workflow validation and stakeholder communication across multiple resort teams.

AI-ASSISTED DEVELOPMENT EXPERIENCE

Loveable FEGA / SAM Replica

Independently worked on an AI-assisted rebuild of the FEGA/SAM platform in Loveable, translating legacy YAML/Axion app behaviour into a modern React/Supabase-style application concept.

Work Completed

- Rebuilt core guest-facing and staff/admin app concepts inside Loveable.
- Imported and validated real service data, service categories, provider teams, provider-service mappings, provider availability, room types, rooms, room-service mappings, room open hours, calendar blocks and provider-room preferences.
- Cleaned long legacy room codes into operational SAM room codes and grouped room types into operational areas such as Spa & Therapeutic, Activities & Fitness, Water Sports, Scuba and Concierge/Common Areas.
- Planned future assignment logic for service-to-room filtering, provider-to-service filtering, room blocking, multi-provider couple services and composite services.
- Modelled complex service requirements such as couple treatments requiring two providers and one room, and infrared therapy as a parent service with Part 1 and Part 2 child calendar entries.
- Developed skills in prompting AI app builders, reviewing implementation plans, validating data imports, translating legacy workflows into modern app architecture and planning safer booking data models.

PROJECTS

Graphic Design Blog - Django Full-Stack Project

Built a Django blog application with authentication, CRUD functionality, Cloudinary image storage, PostgreSQL, custom responsive CSS and Heroku deployment.

JavaScript Colour Palette Generator

Built an interactive JavaScript tool using DOM manipulation, event listeners, copy-to-clipboard functionality, CSS animations and responsive layout styling.

Flask Collections App - Technocore Entry Task

Built a Python Flask app for managing collection records using database-backed storage and CRUD-style functionality as part of the Technocore application process.

EDUCATION

Level 3 Diploma in Software Development - Code Institute Full Stack Development Bootcamp | Jun 2024 - Oct 2024

Covered HTML, CSS, JavaScript, Python, Django, SQL foundations, REST API concepts, Git/GitHub, deployment and Agile/team project workflows.

Level 3 Diploma in Website Design & Marketing for Entrepreneurs - NetcomUK Online Training | Jul 2023 - Oct 2023

Highfield Level 2 Diploma in Digital Marketing & Software Development - Back2Work Online Training | May 2023

PREVIOUS EXPERIENCE

Customer Service Advisor - E.ON Next Energy & Gas Supply, Nov 2022 - Apr 2023 | Labourer - QED Scaffolding, Jun 2019 - Mar 2020 | Warehouse Operative - Amazon / B&M; Warehouses, Jul 2018 - Apr 2019

ADDITIONAL BACKGROUND

Graphic design and digital media background, including experience with Photoshop, After Effects, UI layout, visual design and digital content creation.
